

# Price Review

**Price Review 6 (2026 to 2030) sets the framework for how much money network companies can recover and what must be delivered in return. These decisions have a direct impact on consumer bills and the quality of service they receive. PR6 presents a significant step change in allowances when compared to PR5.**

## Increase investment in the electricity network

- Support economic growth and facilitate electrification of heat and transport sectors, including adoption of low-carbon technologies, such as **1m** EVs and **680k** heat pumps by 2030.
- Connect **4.4 GW** of renewable generation to the distribution system.

## Facilitate offshore wind delivery

- Facilitate delivery of up to 5GW of Offshore wind by **2030**.
- Support EirGrid in establishing **offshore asset owner** function.

## Provide agile and transparent regulatory framework

- PR6 provides Eirgrid and ESB Networks with a **€14.1bn** package of investment in the electricity networks, with the potential to rise to **€18.1bn** through the Agile Investment and Monitoring Framework.
- The framework will provide **transparency** to and aim to deliver better outcomes for customers.

## Support a secure and resilient network

- PR6 will **strengthen** EirGrid and ESBN's organisational capacity & capabilities, **ensuring greater system efficiency**.
- Includes a package of **26** performance incentives across EirGrid and ESB Networks.
- Investment of **€0.89bn** to enhance the storm resilience of the network.
